

Spey Resources is a Canadian exploration company, rooted in addressing the demand for lithium as a natural resource to fuel the future.

Our vision is to contribute to the evolution of high performance lithium powered vehicles as the key mode of transportation on a global scale. We provide the demand for this commodity through our mining projects.

Spey Resources Corp. is pleased to announce that it has completed exploration activities and hit multiple lithium brine aquifers in the Incahuasi Salar (the Candela II Project), the “Lithium Triangle.” We are also pleased to report a planned 5 hole production drilling program in the coming months.

Incahuasi Salar is located in the Province of Salta, located approximately 45 kilometers from the township of Tolar Grande, Argentina.

We are committed to utilizing sound environmental processes to produce lithium, always considering the communities we work in and the land we manage.

“Through our unique extraction methods, we are able to reduce capital expenditures while providing an environmental benefit of preventing water wastage. Our highly skilled technical team has proven expertise in drilling lithium brines.”

Our Canadian Properties:

Spey Resources Corp., further to its news release dated Sept. 28, 2022, has completed the acquisition of 100 per cent of the issued and outstanding share capital of Lithium Energy Metal Corp. (LEM) from all of the former shareholders of LEM. LEM holds interests in four projects in the James Bay region of Quebec near projects held by Patriot Battery Metals Inc. The projects vary in distance from PMET's projects, one of them being within approximately one kilometre of the border of a PMET project.

Patriot Battery Metals Inc (TSX-V: PMET) has recently made a hard rock lithium discovery in the James Bay Region of Quebec. PMET's discovery is located on their Corvette Project and our 4 projects are within 1-25km from PMET Corvette project, with similar aged rock that the discovery was made in.
